

Projected timeline

Tuesday, January 20, 2026 2:14 PM

- Each prompt includes a **short reading/video checklist per chapter**
- Designed so future-you can just paste and go

✓ 1) DATED COURSE CALENDAR (17 WEEKS)

Fixed Meeting Times

- **Monday:** 08:30–10:00 (Lecture)
- **Wednesday:** 08:30–10:00 (Recitation)
- **Friday:** 08:30–09:15 (Light / Passive / Optional)

Assumption: Week 1 starts **this week**.

WEEK 1

Mon: Ch 1 – Introduction to Networks
Wed: Ch 2 – OSI Model (recitation-heavy)
Fri: Video: OSI vs TCP/IP (15–30 min)

WEEK 2

Mon: Ch 3 – Cabling & Wiring Standards
Wed: Ch 23 – Cable Issues & Tools
Fri: Video: Fiber vs Copper failures

WEEK 3

Mon: Ch 4 – Ethernet Specs
Wed: Ch 5 – Networking Devices
Fri: Ethernet frame walkthrough

WEEK 4

Mon: Ch 6 – IP Fundamentals
Wed: Ch 7 – IP Addressing
Fri: IP packet anatomy video

WEEK 5

Mon: Ch 8 – Subnetting & NAT
Wed: Subnetting Recitation (no new chapters)
Fri: Subnetting drill (optional)

WEEK 6

Mon: Ch 9 – IP Routing
Wed: Ch 10 – Routing Protocols
Fri: Routing table logic video

WEEK 7

Mon: Ch 11 – Switching & VLANs
Wed: VLAN + STP Recitation
Fri: VLAN tagging video

WEEK 8 — MIDTERM

Mon: Midterm Review
Wed: **MIDTERM (Ch 1–8)**
Fri: OFF / decompress

WEEK 9 — SPRING BREAK

No meetings
(Optional passive only)

WEEK 10 (Pre-Travel)

Mon: Ch 12 – Wireless Networking
Wed: Wireless troubleshooting recitation
Fri: Wi-Fi security video

WEEK 11–12

NO LIVE CLASSES

✓ Allowed:

- Short videos
- Audio explanations
- Zero-pressure review

✗ No exams, no recitations, no guilt

WEEK 13

Mon: Ch 13 – Monitoring & Sensors
Wed: Ch 22 – Network Availability
Fri: SNMP overview

WEEK 14

Mon: Ch 14 – Policies & Docs
Wed: Ch 15 – High Availability & DR

Fri: RTO/RPO explainer

WEEK 15

Mon: Ch 16 – Security Concepts

Wed: Ch 17 – Attacks

Fri: Attack mapping video

WEEK 16

Mon: Ch 18 – Hardening

Wed: Ch 19–20 – Remote + Physical Security

Fri: Zero Trust overview

WEEK 17

Mon: Ch 21 – Cloud & Data Centers

Wed: Ch 24–25 – Troubleshooting + Tools

Fri: Final light review

FINAL: Official Network+ Exam (scheduled independently)

✔ 2) REUSABLE PROMPTS (ALL 25 CHAPTERS)

Use these **exact prompts** any time in the future.

♦ MASTER PROMPT TEMPLATE (COPY THIS)

You are acting as my Network+ recitation instructor.

Chapter: <CHAPTER NUMBER & TITLE>

1. Explain the core concepts as if I must teach them tomorrow.
2. Show common exam traps and why wrong answers feel tempting.
3. Give 3 real-world failure scenarios.
4. Ask me 5 oral questions and wait for my answers.
5. After I answer, correct me concisely and reinforce intuition.

♦ CHAPTER-SPECIFIC SHORT LISTS

Use these under the master prompt.

Ch 1 – Introduction to Networks

Focus on:

- LAN vs WAN vs PAN
- Client-server vs peer-to-peer
- Network value propositions

Video:

- “What is a Network?” (Professor Messer)

Ch 2 – OSI Model

Focus on:

- Layer responsibilities
- Encapsulation order
- Troubleshooting by layer

Video:

- OSI vs TCP/IP whiteboard

Ch 3 – Cabling & Wiring

Focus on:

- Cat standards
- Fiber types
- Connectors

Video:

- Fiber vs Copper explained

Ch 4 – Ethernet

Focus on:

- Frame structure
- Speed/duplex
- Auto-negotiation

Ch 5 – Networking Devices

Focus on:

- Switch vs router vs firewall
- Layered decision-making

Ch 6 – IP Fundamentals

Focus on:

- IPv4 vs IPv6
- Packet structure
- Fragmentation

Ch 7 – IP Addressing

Focus on:

- Public vs private
- CIDR
- Address planning

Ch 8 – Subnetting & NAT

Focus on:

- Binary subnetting
- NAT types
- IP troubleshooting

Ch 9 – Routing

Focus on:

- Static vs dynamic
- Routing tables
- Metrics

Ch 10 – Routing Protocols

Focus on:

- Distance vs link-state
- Administrative distance

Ch 11 – Switching & VLANs

Focus on:

- MAC learning
- VLAN tagging
- STP purpose

Ch 12 – Wireless

Focus on:

- 802.11 standards
- RF interference
- Wireless security

Ch 13 – Monitoring

Focus on:

- SNMP
- Baselines
- Alerts

Ch 14 – Policies

Focus on:

- Policy vs standard vs procedure

Ch 15 – HA & DR

Focus on:

- Redundancy
- RTO/RPO

Ch 16 – Security Concepts

Focus on:

- CIA triad
- Risk vs threat

Ch 17 – Attacks

Focus on:

- Attack taxonomy
- Social engineering

Ch 18 – Hardening

Focus on:

- Defense-in-depth
- Configuration management

Ch 19 – Remote Access

Focus on:

- VPN types
- Authentication

Ch 20 – Physical Security

Focus on:

- Environmental controls
- Access controls

Ch 21 – Cloud & Data Centers

Focus on:

- IaaS/PaaS/SaaS
- Hybrid models

Ch 22 – Network Availability

Focus on:

- SLA
- Fault tolerance

Ch 23 – Cable Issues

Focus on:

- Testing tools
- Signal loss

Ch 24 - Troubleshooting

Focus on:

- Methodology
- Escalation

Ch 25 - Tools & Commands

Focus on:

- ping, tracert, ipconfig
- When to use which tool

Final Notes (Important)

- Recitation does the heavy lifting
- The exam becomes **pattern recognition**

When you're ready, next we can:

- Generate **Security+ piggyback prompts**
- Create **midterm & mock final**
- Build **one-page weekly cheat sheets**
